

INNERGARD™ ID FBE COATING

Advanced solution to internal corrosion

INNERGARD™ ID FBE COATING

InnerGard™ Coating (Internal FBE)

The Bayou Companies provides InnerGard™ as an alternative solution for traditional polyethylene liners, clad welding or expensive alloy steels for water injection lines.

InnerGard™ Capabilities:

- ID blasting and coating up to 24-inch (DRLs)
- Internal FBE
- Various liquid coating applications
- Customer specific coating applications
- State of the art QA/QC testing and reporting

Advantages to Internal Coating:

- Protects steel pipelines being stored to extended periods prior to installation
- Reduces the cost of inhibitors and pigging
- Eliminates the formation of black powder and inhibits microorganism growth activity
- Extends the life of the pipeline
- Excellent corrosion protection (chemical/water)
- Flow assurance enhancement
- Greatly reduced pipe cost when compared to using high alloy pipe
- All applied coatings shall meet drinking water standards—contact Bayou for additional information regarding certification to the NSF/ANSI Standard 61
- Reelable FBE coatings
- A smooth hard surface that offers better visual inspection
- Increased flow efficiency
- InnerGard™ coating system: comprised of FBE over phenolic primer

InnerGard™ ID FBE Coating Experience List in New Iberia, Louisiana:

- 40,000 feet of 10-inch and 500 feet x 6-inch for the Shell URSA Princess Water Injection Lines (Nap-Gard™ 7-0008)
- 35,600 feet of 10-inch for the Shell Perdido Water Injection Lines (Nap-Gard™ 7-0008)
- 18,720 feet of 6-inch and 46,440 feet of 10-inch for BHP Billiton Shenzi Water Injection Lines (Nap-Gard™ 7-0008)
- 1,700 feet of 24-inch for Dow Chemical (3M™ Scotchkote™ 134)
